

Looking to increase production, or simply keep up with demand? Karmelle Rotary Capping Machines offer an efficient, high-speed solution.

Designed to handle almost any size and style of cap and vessel, our bespoke Rotary Cappers work at speeds of between 40 and 150 bottles per minute (depending on number of heads).

Each machine can cap a wide range of containers – from 20 millilitre vials, to five litre jerry cans.

Compatible caps include:

- Screw caps
- Press on caps
- Aerosol over caps
- Inserts
- Tamper proof caps
- ROPP caps

We select the highest quality components, manufacturing parts and spares in house.

Our Rotary Cappers feature:

- HMI touch screen
- Environmental guarding with door interlocks and reset function
- Fully automatic system
- Omron PLC driven system
- Electrical driven cap drives
- Control mounted in stainless steel enclosure
- Cap hoppers of up to 25 litres

A variety of special features make them reliable and efficient, as well as uniquely robust...

The Specification Includes

- Low cap level alarms
- Eye level rotary unscrambler
- No-foil-in-cap reject sensor with alarm and reject hatch
- No-cap-no-place function
- Magnetic hysteresis clutch
- Gentle touch clutch for turret overriding
